**Soldering heat reliability(DIP)**

Please refer to the following figure

**Soldering Iron**

Basic spec is 5 sec when 260 . If temperature is higher , time should be shorter (+10 → -1sec ).Power dissipation of Iron should be smaller than 15W ,and temperature should be controllable. Surface temperature of the device should be under 230 .

**Rework**

- 1.Customer must finish rework within 5 sec under 245
- 2.The head of iron can not touch copper foil.
- 3.Twin-head type is preferred.

## Reflow Temp./Time

## Precautions For Use

### 1.Over-current-proof

Customer must apply resistors for protection , otherwise slight voltage shift will cause big current change(Burn out will happen).

### 2.Storage

2.1 The operation of temperature and R.H are : 5 ~ 35 , R.H.60%.

2.2 Once the package is opened , the products be should be used within a week.

Otherwise , they should be keep in a damp proof box with desiccation anent.

Considering the tape life , we suggest our customers to use products within a year (from production date).

2-3.If opened more than one week in an atmosphere 5 ~35 , R.H.60%.,they should be treated at 60 ± 5 for 15hrs.

2-4.When you discover that the desiccant in the package has a pink color(normal=blue), you should treat them in the same conditions as 2.3

**Reliability Test Item And Condition**

The reliability of products shall be satisfied with items listed below.
